

UNISTRUT[®] DEFENDER[™] CORROSION-RESISTANT PRODUCT LINE

Unistrut International is proud to introduce a new, corrosion-resistant product line called Unistrut Defender. Unistrut Defender is designed for harsh environments, providing a service life between Hot-Dip Galvanized and stainless steel systems.

1,000 Hour Continuous Salt Spray Test Results

Hot-Dip
Galvanized

Power-Strut
Defender

Why Use Unistrut Defender?

- 3X the performance of Hot-Dip Galvanized*
- Corrosion-resistant
- Avoids costly stainless steel hardware
- Low maintenance - eliminating the need to replace parts over time
- Unique self-healing properties
- Significant cost savings

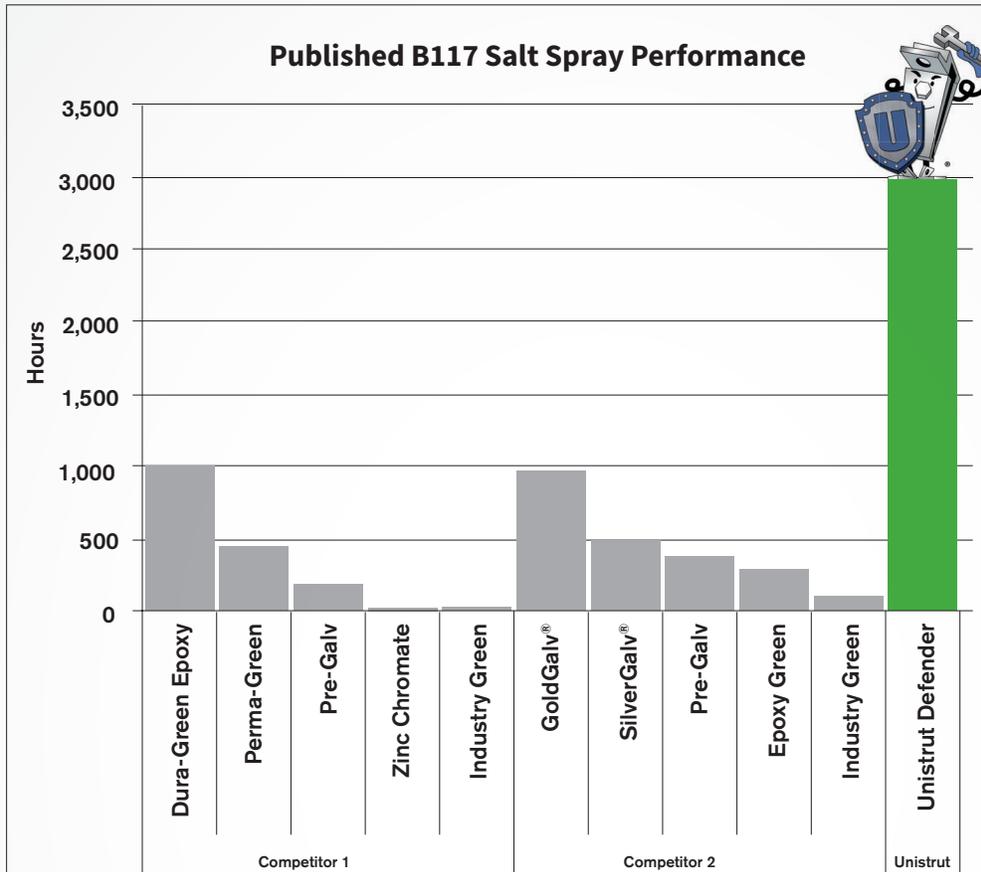

* Based on average ASTM B117 salt spray test results from an independent, accredited test laboratory.

Anticipated Service Life

With over 3 times the corrosion protection, the anticipated service life for Unistrut® Defender™ vastly outperforms traditional carbon steel framing systems. Unistrut Defender will meet the design life of most new applications, eliminating the need to replace parts over time. See the difference below!

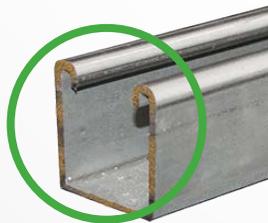

Unistrut Defender delivers 3X the performance of competitive solutions

*Based on manufacturer published materials

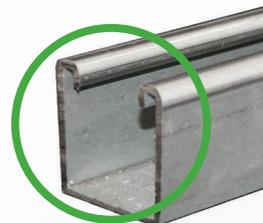

Unique Healing Properties

One unique characteristic of Unistrut Defender is that it contains self-healing properties. If the product is cut or scratched in the field, the finish will propagate into those areas eliminating the need for secondary touch-ups. This gives a sense of confidence that the material will provide lasting defense against corrosion in the field.

Rust may form on the cut end

Will heal over time

NOTE: To achieve full performance and cost benefits, Unistrut Defender must be used as a complete metal framing system. In addition, Unistrut Defender should not be put in contact with stainless steel materials due to a dissimilar metals condition that will create galvanic corrosion.
